

Week 7 Milestone Worksheet

SECTION A: My Team's Problem Statement

Part 1: State your team's problem statement

Please write **your team's** agreed-upon **problem statement** here:

"Many students struggle with organizing their study time effectively due to a lack of structured educational tools. This leads to poor time management, decreased productivity, and lower academic performance. Our goal is to create a solution that helps students better manage their time and enhance their learning experience."

Part 2a: Team's Group Name

Please write **your team's** agreed-upon **team group name**.

Aix Trip

Part 2b: Team's Group Members' Names

Share all your team roles, both primary and backup. Write the peer's name and the role(s) they are filling next to it. Each team has 4 – 6 people and you

must write at the very least 4 names and 4 team roles. But if for any reason you end up with fewer people, you can still write at least 4 roles (2 primary and 2 backup for each person.) List your team members' names and roles in the space below.

Example:

1. Josephine Oware – Project Manager (primary); Data Analyst (backup)
2. Muhammad Khisal Ahmed – Designer (primary); Editor (backup)

Project Manager : Ahmed Samir

Product Manager : Mahmoud Shadad

Data Analyst : Hager Fathy

UX Researcher : Mohamed Azzam

UI/UX Designer : Abdallah Ahmed

UX Researcher : Moaaz Mohammed

SECTION B: Your Team's Solution Idea

Part 1: Bad Idea Brainstorm (Team)

As a team, you must have **generated at least 10 more new bad ideas.** List these down in the space below. You must have captured this list in your Week 6 Milestone.

Remember, the dumber the idea, the better! This is to help you work as a team to be non-critical. **Stay in divergent thinking.** It helps to say "*thank you*" after every idea is shared. List your brainstorming ideas below.

A robot that forces students to study by locking their phones.
An AI-powered chair that shocks students if they get distracted.
A VR classroom where students can't leave until they pass a test.
A machine that instantly transfers knowledge into students' brains.
An app that alerts teachers whenever a student is not paying attention.
A smart desk that hides snacks unless homework is completed.
An AI assistant that automatically completes assignments for students.
A smartwatch that reminds students to study by vibrating every hour.
A social media platform where students can only post after studying.
A mobile app that plays loud alarms if students don't start studying on time.

Part 2: Narrowed Ideas

Your next task is to provide a list of your team's **narrowed choices**, which will put you in a **convergent thinking mindset**. You should have discussed and debated this and tried to reach a consensus on **3 ideas for a solution** (or **partial solution**) to your problem that your team will consider working on for the rest of Month 2. These ideas can be totally new, the same, or variations from ideas you've already come up with.

Remember that they should involve some sort of technology (*either a piece of software like an app or algorithm, or a physical device such as a robotic fish or machine that scans your DNA*). You will not have to build the solution out. But you will have to create some type of basic prototype (*if it is a device*) or a set of wireframes (*if it is an app/software*). You will not have to actually create the technology or code. Write the top 3 of your shortlisted ideas below.

A smart study planner app that uses AI to create personalized study schedules.
A gamified learning platform that rewards students for completing tasks.
A digital note-sharing platform for students to collaborate and exchange study

materials.

Part 3: Selected Solution

Lastly, your team must have agreed on one idea for a solution (or partial solution) that you will work on for the rest of Month 2.

Remember, the solution should involve some sort of technology and be possible to create—but feel free to make it very ambitious! You will have to create some type of basic prototype (if it is a device) or a set of wireframes (if it is an app/software). You will not have to actually create the technology.

You must find a fair way to reach a consensus with your group, including a discussion in which everyone's voice can be heard. Write down this finalized solution idea below, in as much detail as possible.

"Our team decided to develop an AI-powered study planner app that helps students organize their study time effectively. The app will offer personalized study schedules, task reminders, progress tracking, and gamification elements to motivate students. This solution aims to improve time management skills and overall academic performance."

SECTION C: My Team's Wireframe/Prototype

Part 1: If Wireframe

In the space below, add a link to the images of each screen of your wireframes. The images must be digitally created (using a tool like Figma, Miro, or Keynote), not drawn by hand. You should have at least 6 images. Each image must contain at least 1 navigation indicator, at least 1 element (such as a button), and at least 1 annotation. You can upload the images to a Google Drive folder and share that link below.

Optionally, you may create a video similar to [this one](#) to better showcase your wireframes. It should be no more than 60 seconds long. Upload this video to YouTube (you can choose to make it unlisted) and provide the link.

Add the links to either the images or the video, in the space below. Please double-check that the link is correct.

https://drive.google.com/drive/folders/1R3dwBn-DBdzyFid48Geoht5WUYSiLAC8?usp=drive_link

Part 1: If 3D Prototype

Create a video lasting no more than 60 seconds that shows your prototype in action. It should provide a full 360-degree view of your prototype and show or explain at least 5 of its functions. Upload this video to YouTube (you can choose to make it unlisted) and provide the link in your Google Doc. IMPORTANT: Please double-check that the link is correct and working!

SECTION D: How the Project's Going

Part 1: Process Reflection

In 5 to 10 sentences, please share an overview of your and/or your team's process of deciding on the problem you're going to solve, finalizing a solution you're going to work on, and then creating wireframes or a prototype. What was the most challenging thing about this whole process? What did you learn? What went very well for you?

"Our journey started with brainstorming various educational challenges and narrowing them down to time management issues faced by students. We explored different solutions and selected the AI-powered study planner app as our final concept. The most challenging part was balancing simplicity and functionality in our design. Through this process, we learned the importance of user feedback, iteration, and collaboration. The best part of this experience was seeing our ideas take shape into a structured design."

SECTION E: User Feedback

Part 1: User Interviews

List the names of the people you or your team members interviewed for your user feedback. You must have interviewed at least two people, but you can do more.

We conducted interviews with the following individuals:

1. Ali Mohamed - University Student

2. Heba Adel - High School Student

Part 2: User Interviews

Please describe **at least 4 pieces of feedback** that you received from your users and whether or not you plan to take action on it. For each piece of feedback, list the feedback in the space below and then mention what you're going to do about it underneath it.

Feedback 1

The app should have a feature that automatically adjusts study schedules based on upcoming deadlines.

Your Action Plan for Feedback 1

We will implement an AI-based feature that reorganizes tasks dynamically.

Feedback 2

The user interface is a bit cluttered, making it hard to navigate.

Your Action Plan for Feedback 2

We will simplify the design, reducing unnecessary elements for a cleaner interface.

Feedback 3

Adding a collaborative study group feature would be useful.

Your Action Plan for Feedback 3

We will explore integrating a study group function where students can share notes and study together virtually.

Feedback 4

It would be great if the app could track time spent on each subject and give personalized study tips.

Your Action Plan for Feedback 4

We will develop a feature that analyzes study patterns and offers tailored recommendations.

SECTION F: Team Reflection

Part 1: Reflecting on the Team Experience

In the spaces provided after each question, reflect on and answer the 7 questions listed below.

Part 1 A: What is working well with your team?

"Our team collaborates effectively, and everyone contributes unique skills. We communicate well and share responsibilities fairly."

Part 1 B: What is one good thing that happened during your team meeting?

We successfully agreed on a final design concept that everyone was excited about.

Part 1 C: What is one thing your team could do better in the next meeting?

Improve time management during discussions to ensure we cover all agenda points efficiently.

Part 1 D: Are you experiencing any concerns or frustrations with your team? If yes, what can you personally do to lessen the concern/frustration?

Sometimes, decisions take longer due to differing opinions, but we are learning to find compromises.

Part 1 E: How would you rate your ability to communicate with your team members on a scale of 1 to 4? (1=extremely poor and 4=excellent)

Excellent

Part 1 F: Overall, how satisfied are you with how well your team is working together? (On a scale of 1 to 4, with 1=extremely poor and 4=excellent)

Excellent

Part 1 G: Is there anything else you'd like to share about your team and their process?

We are proud of how far we've come and excited to refine our project further

Once you have completed this worksheet:

1. Save as a .pdf.
 1. Rename it per the instructions.
 2. Upload to Savanna as your Week 7 Milestone Submission.
 3. **Celebrate a job well done!**
-
